# Group Project, Deliverable 0
# (add contact info)

The goal of this assignment is simply to add your contact information to a file in your team repository, so that your team members will know your name and how to contact you. To complete the assignment you must do the following:

1. Clone your **team** repository. Please note that **this is different from your individual repo** and is called `370Fall18Team<team number>`. You should have received an email from GitHub that lets you know you have been added to your team repo. If everything else fails, please contact us privately on Piazza.
2. Go to the root directory of your local copy of the repository (i.e., `370Fall18Team<team number>`).
3. If it's not already there (one of your team members might have already created it), create a file, called `TeamInfo.txt`
4. Whether you created it (and it is thus empty) or it was already there (and it thus contains information for one or more of your team members), add to the file `TeamInfo.txt` a line with the following information:
   `<first name> <last name>, <email address>`
   (use the email address that you want your team members to use to contact you)
5. Commit and push your changes (suitably handling conflicts in case one of your teammates pushed his or her changes after you cloned the repo and before you pushed your own changes).
6. Submit your commit ID on Blackboard.

Note that it should take you less than a minute to finish this assignment, so please try to complete it right away.
